EXT56

TYPE 10 EXTENDER BOARD

Description

The EXT56 is a 56 pin type 10 extender board. It allows access to a type 10 card for service, testing or adjustment while that card is functioning in its intended application. The EXT56 extends the card edge connection, positioning a type 10 card out beyond the edge of a typical type 10 shelf. Numbered test pads allow access to all 56 pins of the extended card.

Specifications
